enLux® Lighting

Our Company

enLux Lighting is an award-winning manufacturer and innovator of LED technology based in Tempe, Arizona. enLux Lighting leads the world with its drop-in R30 Series LED lights, replacing the incandescent light bulb with energy-efficient, environmentally friendly LED lighting. enLux Lighting is a global pioneer and leader dedicated to research and development of more efficient lighting that is bright, safe, environmentally-friendly as well as highly energy efficient.

Our Vision

When our company founder organized an expedition to the peak of Mount Everest in 1993, he was rewarded with a remarkable vision. He beheld the awe-inspiring beauty of the earth from the mountain - a perspective experienced by very few. This unique vista of the earth compelled him to approach his life and career in a whole new way. It was at that moment he decided he would personally do what he could to preserve this amazing planet. He decided right then and there that he would make a difference. The difference began with enLux. At enLux, our vision is clear and simple – create better lighting while preserving the planet. It's the most important part of everything we do, from the innovative technology products we invent, to the criteria we use to choose representatives and distributors, to the way we relate our products to our customers.

Our Mission

To bring better, more efficient lighting to the world - lighting that is bright, safe, environmentally-friendly and highly energy efficient.
